

 **PRODUCT INFORMATION**

Testing Device

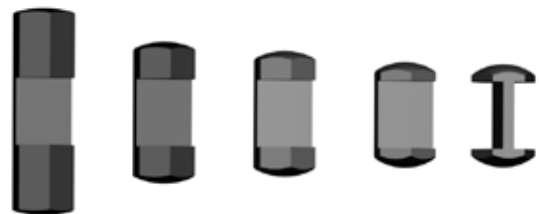

for Wheel Balancing Machines

Product Description

This testing device is used for fast and accurate checking of all stationary wheel balancers.

Product features

- In a simple way the function and display accuracy of the wheel balancer as well as the condition of the adaptors can be checked
- An adjustment can be made even faster than previously as with this method it is not necessary to obtain a „zero-balanced wheel“ beforehand
- The testing device corresponds to a „zero-balanced wheel“ of 6,5J x 15

Test weights: 100g, 60g, 50g, 40g and 25g
